

## **Joint Health & Safety Committee Refresher Training – CPO Approved Program**

JHSC Refresher Training renews the participants' Certifications for another 3 years. The Refresher program is required by those that completed both Part I & Part II after March 1, 2016 under the new standards. It must be completed three (3) years from the date that the Part II training was completed, then every three (3) years after that date to maintain Certification status.

If you were fully certified under the old standards (prior to March 1, 2016), it is not mandatory to take the Refresher program. However, you may still attend the course to get updated on the current standards and regulations, and all the changes that have taken place in the past few years.

Refresher Training is a 1-day program that reviews previously learned material from JHSC Part I and JHSC Part II, as well as provides updated legislative changes and best practices. At the end of this program, you will be up-to-date with the knowledge you need to maintain your role in your JHSC.

In this program, we cover:

- A review of the Legislation, including the responsibilities and rights of workers and employers
- A review of the role of Certified Members in JHSCs
- A review of the identification of and the process through which Health and Safety Hazards affect workers
- A review of the requirements to give Notices for accidents and injuries
- A review of all of the changes made within the last 3 years to Legislation and Best Practices
